

Novade – Company

Novade was launched in 2013, after realizing a need for innovative methods to boost productivity in the construction sector. Due to the industry's unique nature, digitization has been comparatively slower to catch on in construction than for other industries, such as manufacturing. We are deploying digital solutions that can be utilized on-site to save time and paperwork, and to address this growing need for productive sites.

Novade – Founder

Novade's Founder and CEO, Denis Branthonne, is a firm believer in the 'get it done' philosophy. An MIT graduate and former VP of APAC Sales at Autodesk, Denis noticed the increasing need for digitization in construction. He believes in a hands-on approach to building things and when he's not presenting to industry professionals, he can be found on construction sites getting his hands and his shoes dirty trying to make sure that Novade's software stays true to the way people work.

Novade – Products

We have launched six unique modules that address specific project management needs: **Quality, Safety, Maintenance, Logistics, Resources, and Projects**. Each module can be used on its own or in conjunction with others to offer a customizable package that is designed to apply to any type of project in the industry. Overall, these modules digitize vital paper-based processes, and keep teams connected digitally in real time, no matter their location. **Novade Quality** is used to lodge defects in residential spaces; **Novade Safety** is utilized on infrastructure projects to ensure high safety standards; and **Novade Maintenance** is used for day-to-day maintenance operations in airports and hospitals.

Novade – Competitive advantage

What differentiates Novade from other solutions, is the integration of the modules and the ability to operate from different devices, including Android and iOS phones and tablets, in tandem with our desktop application. This means that managers can collect data and organize activities from their computers in an office, while officers can fill out reports in real time on-site with their phones. Our solutions are tailored to suit a variety of project types, and over the last few years our application has been used on a wide range of sites around the world

Novade – Positioning

At Novade, we help companies in the construction industry digitize processes on sites. Our applications are easy to use and easy to deploy, and they help the companies to improve their productivity. We deliver modules to address a variety of aspects, including quality, safety, maintenance, and more. All of these modules come together and it really helps the teams on site to become more efficient. We are at the turning point, where technology can fundamentally redefine the way companies operate on-site and manage their supply chain. These are exciting times in the construction and building industry, and Novade is at the forefront of this innovation.

Our company mission is simple: we leverage technology to increase your productivity. We combine passion and expertise for new technologies together with a deep understanding of how companies in the building and construction industry operate.

The only thing we love more than building things well is helping you build well.
